

This is a unique little mandrel we came up with for polishing ports & mandrels.

It is used by placing PSA discs (sold separately) back-to-back on the arbor with spacers in between them so you have a two-sided cutting disc. This works great on a radius or for removing a "kink" that a cartridge roll won't conform to.

This mandrel works a whole lot better than a swizzle stick.

**Shank is 1/4" Diameter
7" Overall Length**

Port Radiusing Mandrel

PSA Discs

These are discs for the above mandrel. They have already have the center hole for the mandrel.

* 1" Diameter

* 40, 60, 80 & 120 Grit

* Aluminum Oxide Cloth

Here are two tools that will save time and eliminate a lot of frustration.

One magnet removes valve spring shims and keepers, while the other magnet is designed to remove the washers from the cylinder head when studs are being used. If you have ever fought this little task that can drive you up the wall, you will appreciate the two in your tool box.

Tools are machined from aluminum and anodized; the magnets are small but strong.

Valve Spring Shim & Head Bolt Washer Magnets

Illuminated Magnifier

A 10-power magnifier of the highest optical quality.

- * Good resolution & perfect illumination
- * Ideal for inspecting rings, grooves, plugs, etc.
- * Rust proof brass battery case
- * Takes two "C" batteries (not included)
